

Table 2. **PERCENTAGE OF WEIGHT OF VARIOUS COMPONENTS OF THE COMPOSITE BOMB CASE**

|                                       | <b>PERCENTAGE OF WEIGHT</b> |
|---------------------------------------|-----------------------------|
| <b>All items</b>                      | <b>100.00</b>               |
| Lead                                  | 1.07                        |
| Ammonium nitrate                      | 6.83                        |
| Other materials                       | 1.16                        |
| Aluminum foil                         | 4.24                        |
| Aluminum and remainder of the case    | 3.25                        |
| Plastic                               | 2.46                        |
| Manufactured parts                    | 19.77                       |
| High purity and remainder of the case | 69.31                       |
| Unidentified                          | 1.11                        |

**NOTE:** Percentages are based on the total weight of the bomb, which is the sum of the weights of the components, listed at the beginning of each column.

The "All items" value is a weighted sum; for all other components, the weight was not weighted.
